

Dineshkumar Anbalagan

Java Backend Developer | Graduate Software Engineer | Spring Boot Developer

GitHub: github.com/Dinesh-kumar-Anbalagan | LinkedIn: [linkedin.com/in/Dinesh-kumar-Anbalagan](https://www.linkedin.com/in/Dinesh-kumar-Anbalagan)

Profile:

Java Backend Developer with 2+ years of experience in logistics and real estate domains, specialising in **Java, Spring Boot, REST APIs, SQL databases, and dynamic backend orchestration**. Experienced in building scalable backend services, workflow-driven applications, **Elasticsearch-based search features, Flyway database migrations**, and backend integrations. MSc Computer Science graduate from the University of Hertfordshire, seeking Graduate Software Engineer / Java Backend Developer roles.

Right to work: Currently based in the UK on a Student visa. Completed MSc Computer Science and planning to apply for the Graduate visa in September 2026, subject to university confirmation and visa validity. Available for full-time Graduate Software Engineer / Java Backend Developer roles.

Skills:

- **Programming:** Java, Python, JavaScript, TypeScript
- **Backend:** Spring Boot, REST APIs, FastAPI, Hibernate
- **Frontend:** Angular, React
- **Testing:** JUnit, Mockito
- **Databases:** PostgreSQL, MySQL
- **Cloud & DevOps:** Kubernetes, Docker
- **Messaging & Event:** Kafka, RabbitMQ, SQS
- **CI/CD Pipelines:** Jenkins, GitHub Actions
- **Monitoring & Logging:** Elasticsearch, Kibana, Datadog
- **AI/LLM Tools:** FastMCP, MCP, LangChain, Gemini, Claude

Experience:

Software Engineer (July 2022 - August 2024), LTIMindtree – Chennai, India.

- Developed backend services and REST APIs using Java, Spring Boot, and SQL for logistics and real estate domain applications.
- Worked with PostgreSQL, MySQL, RabbitMQ, Elasticsearch, Flyway, and Datadog across development, debugging, and production support activities.
- Investigated and resolved application defects through **log analysis, stack tracing, and root cause debugging**, improving system performance and stability.
- Applied structured software engineering practices, including **unit, integration, and component testing, ensuring maintainable and high-quality code**.
- **Delivered high-quality features and fixes within tight deadlines, successfully managing multiple priorities and release demands in high-pressure environments**.
- Supported production operations through **proactive monitoring, troubleshooting**, and incident resolution, contributing to high system availability.
- **Collaborated with onsite developers**, product stakeholders, and cross-functional teams to translate requirements into technical deliverables.

Open-Source Experience:

Google Summer of Code Contributor | EMBL-EBI BioSamples MCP Project (2026)

- Building an MCP server for EMBL-EBI BioSamples to support AI-assisted **sample search, metadata extraction, validation, and submission preparation**.
 - Developed backend tool services using **Python, FastMCP, dynamic tool registration, dependency injection, orchestration middleware, Redis caching, and structured logging**.
 - Integrated BioSamples APIs and **designed JSON input schemas to improve natural-language tool usage and metadata handling**.
-

Projects:

Dynamic Shipment Orchestration Backend | University of Hertfordshire (2025)

- Built a Java Spring Boot dynamic orchestration framework to execute backend services at **runtime using Spring Application Context, reducing tight coupling across modules**.
- Designed a **central Orchestrator service** to route requests to Database, Jasper Reporting, Elasticsearch, and business services based on runtime flow configuration.
- Integrated Elasticsearch for fast shipment/application data indexing, searching, and retrieval, **improving data discovery and search performance**.
- Used Camunda for workflow-driven process execution, enabling service coordination through configurable business flows.
- Implemented **MyBatis persistence and Flyway database migrations** to support maintainable data access and consistent schema versioning.

Worldwide Express (WWEX) (09/2023 - 08/2024)

- Built and enhanced shipment booking services across multiple US regions using **Java, Spring Boot, Camunda, PostgreSQL, Flyway, RabbitMQ, Datadog, and Elasticsearch**, improving backend reliability and operational efficiency.
- Implemented **Elasticsearch-based search and reporting features for high-speed shipment data retrieval** and automated Excel exports, reducing manual reporting effort and improving user productivity.
- Integrated **Amazon S3 for large document storage** and byte-stream retrieval, enabling scalable file handling while reducing dependency on local server storage.

ZAP (06/2022 - 08/2023)

- Worked on a real estate platform **supporting customer and broker interactions** for property deal discovery based on location and business requirements.
 - Integrated **MySQL** for relational data storage and optimised queries — **enhanced skills in database design and performance tuning**.
 - Used **Datadog** for monitoring and debugging production services — **developed expertise in observability, troubleshooting, and system reliability practices**.
-

Education:

Master of Science in Computer Science | 2024 - 2026
University of Hertfordshire, Hatfield, United Kingdom
Status: Completed

Certifications:

- Core Java – T4TEQ Learning Centre
- Database Management Systems – T4TEQ Learning Centre
